

How to Set Up Funny Biz Bouncers

A flat grassy area 20' x 20' will do. No overhead obstructions (watch out for power lines.)

B sure to unfold bounce unit and place fill tube onto blower unit. Close off any other tubes. (place Velcro banner if you have a theme bouncer) ie Nemo

C that you plug into 110 volt power using less than a 75' extension cord. Unit blower must stay plugged in, until you're done bouncing and kids are out.

D stakes should be placed into tabs on bottom of bouncer then hammer stakes into ground at an angle.

E specially be aware of winds over 20 mph. Bouncers should be cleared of occupants, taken down, and covered immediately in the event of high winds or rain (unit weighs a ton and makes a mess if water soaked) very dangerous under those conditions.

F or safety reasons have only 6-8 children on at one time and have big kids bounce with big kids and little kids bounce with little kids. (NO FLIPS, FOOD, SILLY STRING, or SHARP STUFF, INSIDE) !!

Gee ,To take down get kids out, disconnect blower, fold up, and cover bouncer, and blower when you are done and most of all have fun. If you have any questions or problems, please call 802-734-0223. (cell)
